

28th February 2019.

To Whom It May Concern

This is to confirm that Mr. Edirisinghe Arachchige Tharindu Dushan Edirisinghe was a full-time permanent employee of WSO2 Lanka (Pvt) Limited which is a subsidiary of WSO2 Inc., from 01st May 2014 to 28th February 2019. Mr. Edirisinghe joined as a Software Engineer and upon his performance he was promoted as a Senior Software Engineer on the 01st April 2016 and as a Associate Technical Lead on the 1st May 2018.

WSO2 is an open source application development software company focused on providing service-oriented architecture (SOA) solutions for professional developers and offers a complete lean enterprise middleware platform, available as open source products, public or private cloud services.

Mr. Edirisinghe was a member of the “WSO2 Identity Server” product team from May 2014 through December 2015, and later joined the “WSO2 Platform Security Team” in January 2016.

Duties & Responsibilities

- Designing features of the WSO2 Identity Server product by taking into account customer requirements, customer feedback, various Identity and Access Management specifications and industry standards.
- Create software design specifications that incorporate identified software requirements into the product.
- Developing software according to software design specifications in order to fulfill customer/product requirements.
- Conducting unit and integration testing to ensure developed components are bug free and adhere to the requirement specifications.
- Preparing technical documentation related to the developed software such as Architecture Documents, Implementation Guides and User Guides.
- Participating in design reviews of other team members to validate the required security controls are in place.
- Participating in code reviews of other team members to validate the correctness, maintainability as well as secureness of the implemented features.

- Conducting live demonstrations to customers and prospects of WSO2 using products of the company that are catering to the Identity and Access Management, API Management and Enterprise Integration domains.
- Visiting customers at their premises and providing solution architectures to solve their enterprise problems and implementing software solutions on-site. Such engagements included travelling to countries such as USA and India.
- Debugging and troubleshooting complex and intermittent issues in production deployments within tight timelines.
- Leading a customer support team, on rotational basis, to provide timely and quality customer support solutions within the associated SLAs.
- Leading temporary emergency response teams to resolve critical security and functional issues of the software products.
- Conducting trainings on Identity and Access Management, API Management, Enterprise Integration, and security best practices, to customers and internal teams of WSO2.
- Conducting technical interviews of Software Engineers to absorb them into the engineering team of WSO2.
- Conducting technical sessions in WSO2 meetups on the topics of cyber security.
- Software vendor and procurement management for enterprise security related external software products being used at WSO2.
- Preparing enterprise security standards and policies related to secure engineering best practices within WSO2.
- Defining controls for security incident and risk management for business continuation.
- Conducting vulnerability assessments on cloud based and on-premise systems used by WSO2.
- Acting as a Data Protection Officer (DPO) at WSO2 for General Data Protection Regulation (GDPR) compliance.
- Introducing and managing the 'WSO2 Security Reward and Acknowledgement Program'.

Should you require further clarifications please contact the undersigned.

Thank you.
